### Modification/Formatting

- Data originally in nine separate shapefiles.
- Attributes for all nine files exported as stand alone tables.
- “Months” field added to each table.
- Similar tables merged into a single table (all Seabird Density, all Seabird Density SE, and all Marine Mammal % Presence), resulting in three separate tables.
- Master grid containing all transect areas created, all bird and marine mammal data deleted from the attributes.
- Relationship class created for each merged table relating the data back to the master grid based on tgridID.

### Field Definitions:

Please see each table’s metadata for field definitions.
